Universal Registration Document 2022

including the Annual Financial Report

This is a translation into English of the Universal Registration Document 2022 including the Annual Financial Report of the Company issued in French and it is available on the website of the Issuer.

"I certify, that the information contained in this Document d'enregistrement universel (Universal Registration Document) is in accordance with the facts and makes no omission likely to affect its import.

I certify, to the best of my knowledge, that the Statutory and Consolidated Financial Statements of TotalEnergies SE (the Corporation) have been prepared in accordance with applicable set of accounting standards and give a true and fair view of the assets, liabilities, financial position and profit and loss of the Corporation and of all the entities included in the consolidation, and that the rapport de gestion (management report) of the Board of Directors as referenced in the cross reference list included on page 667 of this Document d'enregistrement universel (Universal Registration Document) presents a fair view of the development and performance of the business and financial position of the Corporation and of all the entities included in the consolidation, taken as a whole, and describes the principal risks and uncertainties they face."

On March 24, 2023

Patrick Pouyanné

Chairman and Chief Executive Officer

This Universal Registration Document was filed on March 24, 2023 with the French Financial Markets Authority (Autorité des marchés financiers), as the competent authority under Regulation (EU) 2017/1129, without prior approval in accordance with Article 9 of said Regulation.

This Document d'enregistrement universel (Universal Registration Document) may be used for the purposes of a public offer of financial securities or the admission of financial securities to trading on a regulated market only if supplemented by a transaction note and, if applicable, a summary and all amendments to the Document d'enregistrement universel (Universal Registration Document). The group of documents then formed is approved by the French Financial Markets Authority in accordance with Regulation (EU) 2017/1129.

This document has not been approved by the UK Financial Conduct Authority and does not constitute a Universal Registration Document within the meaning of applicable UK law.

1.1 TotalEnergies at a glance

1.1.1 A multi-energy company

TotalEnergies is a global multi-energy company that produces and markets energies: oil and biofuels, natural gas and green gases, renewables and electricity. Our more than 100,000 employees are committed to energy that is more affordable, cleaner, more reliable and accessible to as many people as possible. Active in close to 130 countries, TotalEnergies puts sustainable development in all its dimensions at the heart of its projects and operations to contribute to the well-being of people.

VALUES ANCHORED IN OUR DAILY ACTIVITIES

Safety, Respect for Each Other, Pioneer Spirit, Stand Together and Performance-Minded are what drive us. These values guide daily the actions and relations of the Company with its stakeholders.

These five strong values also require all of TotalEnergies' employees to behave in an exemplary manner. Priority is given to safety, security, health, the environment, integrity in all its forms (including the fight against corruption, fraud and anti-competitive practices) and human rights.

It is through the strict adherence of our employees to these values and to this course of action that our Company intends to build strong and sustainable growth for ourselves and for all of our stakeholders.

In this way, we deliver on our commitment to better energy.

OUR PROFILE

Our employees

Employees breakdown by geographical area

Workforce as of December 31, 2022: 101,279

Employees breakdown by gender

Proven expertise in 2022

- 101,279 employees
- Nearly 160 nationalities
- More than 740 business-related competencies
- 470,000 days of training
- More than 400 talent developers to help employees along their professional development path

Employees in 2022

- \$9.0 billion payroll (including social security charges)
- €163 M for training
- 92.1% of employees on permanent contracts, and women account for 42.1% of employees hired on permanent contracts
- 83.4% of employees hired by the Company and 62.7% of managers hired were non-French nationals

Our shareholders

Shareholding structure by ideological area ⁽¹⁾

Estimate as of December 31, 2022, based on the request for the identification of shareholders made on that date, pursuant to Article L. 228-2 of the French Commercial Code.

(3) Includes refineries in Africa that are reported in the Marketing & Services segment.

(4) Including 50% of the joint venture between TotalEnergies and Borealis.

(5) Including interests in Qatar, 50% of the capacities of Hanwha TotalEnergies Petrochemical Co. Limited and 37.5% of SATORP in Saudi Arabia.

(6) Olefins.

(7) Excluding trading and bulk refining sales.

(8) Including Turkey.

(9) Including Indian Ocean islands.

1.1.2 Our history: an energy transition in progress

The Company was founded on March 28, 1924. Historic player in energy it discovered major fields worldwide and developed an ever-growing number of advanced products and services, created in its refineries and marketed through its retail network. The Company has gradually diversified its activities and broadened its presence around the world. We have positioned ourselves in the gas, refining, petrochemical and petroleum product distribution segments. We have begun a transition towards renewable energies: solar, sustainable biofuels and electricity, mostly from renewable sources.

Creation in Brussels of the Compagnie Financière belge des Pétroles, known as PetroFina.

1920

The IPC is awarded a 75-year concession on March 14.

1925

CFP shares are first traded on the Paris Stock Exchange.

1929

Start of production of the Gonfreville refinery in Normandy (France), with an annual capacity of 900,000 tons of crude oil.

1933

1924

Creation of the Compagnie française des Pétroles (CFP)
On September 20, 1923, the French President of the Council Raymond Poincaré entrusts an important mission to Ernest Mercier: create a «tool capable of carrying out a national oil policy». Six months later, the Compagnie française des Pétroles is born on March 28, 1924.

1927

Initial discovery at the Kirkuk field in Iraq
CFP makes its first discovery, under an agreement with the government of Iraq. Oil rises to the surface in Kirkuk, a field with considerable reserves. This marks the beginning of TOTAL's adventure in the Middle East.

1939

Discovery of the Saint-Marcet gas field, the first hydrocarbon reserves found in France
Creation of Régie Autonome des Pétroles (RAP), which later becomes the Elf Group, to explore a vast area around Saint Gaudens.

1941

Creation of Société nationale des pétroles d'Aquitaine (SNPA).

1954

Launch of the TOTAL brand by CFP

At the beginning of the 1950s, the leaders of CFP and CFR (Compagnie Française de Raffinage) decide to create their own distribution network, and a brand for it. The new TOTAL brand and logo are adopted in 1954.

1951

SNPA discovers the Lacq gas field in France

The gas rises from a depth of 3,450 meters at extremely high pressure. The specialist crews take five days and four nights to harness the eruption. Lacq is later found to be a gigantic natural gas field containing some 262 billion cubic meters.

First offshore well on Umm Shaif (Abu Dhabi).

1958

1956

Discovery of the Edjeleh, Hassi R'Mel (gas) and Hassi Messaoud (oil) fields in the Algerian Sahara

The exploration campaigns that SN Repal and CFP-A had initiated in 1946 result in the discovery, in 1956, of huge oil fields in Edjeleh and Hassi Messaoud and gas reserves in Hassi R'Mel.

Launch of the Elf brand

A countrywide campaign, "Red circles are coming" introduces France to the Elf brand starting on the night of April 27, 1967.

1967

1961

Discovery of the first offshore fields in Gabon
The Anguille field is the first one found.

1970

Elf takes control of Antar.

TOTAL takes a permit in Indonesia, and goes on to find the Bekapai field in 1972 and the gigantic Handil field in 1974.

The Girassol field on Block 17 in Angola starts production.

2001

TotalFinaElf changes its name to TOTAL.

2003

Investment in the solar energy sector with the acquisition of 60% of the US company SunPower

On June 15, 2011, TOTAL and SunPower Corp. announce the success of TOTAL's friendly tender on SunPower to create a new global leader in the solar industry.

2011

2000

Following the merger of Fina in 1999, TOTAL acquires Elf Aquitaine. The new Group is called TotalFinaElf and is the world's fourth largest oil major.

1991

CFP, which had become Total-CFP in 1985, becomes TOTAL.

1983

Birth of the company Atochem, an SNEA subsidiary, the merger of ATO Chimie, Chloé Chimie and part of Péchiney Ugine Kuhlmann.

1976

Creation of Société nationale Elf Aquitaine (SNEA), the merger of ERAP and SNPA.

1974

The Group acquires Hutchinson-Mapa, a specialist in rubber processing.

1971

The Ekofisk field in the North Sea starts production.

Acquisition of Direct Energie

On July 6, 2018, TOTAL announces the completion of the acquisition of Direct Energie and the launch of a tender offer on the company. This operation enables the Group to accelerate its integration downstream along the full gas and power value chain and to reach critical mass in the French and Belgium markets, where it is growing fast.

TOTAL acquires Engie's LNG business and becomes the world's number-two liquefied natural gas player.

TOTAL acquires exploration and production company Mærsk Oil & Gas A/S in a share and debt transaction. This acquisition makes TOTAL the second largest operator in the offshore North Sea.

2018

2019

Acquisition of 26.5% in the Mozambique LNG project

This acquisition stems from an agreement with Occidental to acquire Anadarko's assets in Africa, and expands TOTAL's position in liquefied natural gas.

2017

Launch of Total Spring in France.

2016

Acquisition of Saft Groupe

On July 18, 2016, TOTAL acquires Saft Groupe, a world leading designer and manufacturer of advanced technology batteries for industry, complementing its portfolio with electricity storage solutions, a key component of the future growth of renewable energies.

Acquisition of Lampiris in Belgium.

TOTAL becomes TotalEnergies and turns into a multi-energy company with the ambition of being a major player in the energy transition.

2021

2020

TOTAL states its new climate ambition: carbon neutrality by 2050

On May 5, 2020, TOTAL announces its ambition of reaching net zero emissions by 2050, together with society, from the production to the use of the energy products by the customers.

2050
net zero emissions,
together with
society

1.1.3 Our business model

Integrated value chain

Resources and ecosystem

Proven expertise

101,279 employees
 Nearly **160** nationalities
 More than **740** business-related competencies
470,000 days of training
 More than **400** talent developers to help employees along their professional development path

A responsible innovation

R&D budget: **\$762 million**
18 R&D centers worldwide
 More than **200** patent applications in 2022

Top-tier industrial and commercial assets

16.8 GW⁽¹⁾ of gross installed renewable power generation capacities
 More than **42,000** EV operated charging points
 Proved reserves of **10.2 Bboe** and hydrocarbon production of **2,765 kboe/d**
16 refineries including **1** biorefinery **29** petrochemical sites including **6** integrated platforms (refining-petrochemicals)
84 specialty chemicals production sites **36** production sites operated (lubricants and greases)
 More than **14,600** service stations in close to **65** countries

Solid financials

Operating cash flow before working capital changes without financial charges: **\$47.0 billion**
 Net investments: **\$16.3 billion**
 Gearing ratio (excluding leases): **7.0%**.
 Pre-dividend organic cash breakeven : **\$23.2/boe**

Geographic reach

Present in close to **130** countries
 Hydrocarbon production in close to **30** countries

Environment

Fresh water withdrawal: **107 Mm³**
 Net primary energy consumption: **166 TWh** (operated perimeter)

Data as of December 31, 2022.

Shared value creation

Employees

\$9.0 billion payroll (including social security charges)
€163 million for training
92.1% of employees on permanent contracts and women account for **42.1%** of employees hired on permanent contracts
83.4% of employees hired by the Company and **62.7%** of managers hired were non-French nationals

Customers

Sales: **\$281 billion**
3rd largest LNG player worldwide with **48.1 Mt** of LNG sold in 2022, including **17.0 Mt** from equity production of the Company
33.2 TWh of net power production, including **10.4 TWh** from renewable sources
96.3 TWh of gas delivered to **2.7 million** BtB and BtC clients sites
55.3 TWh of power delivered to **6.1 million** BtB and BtC clients sites
 Close to **100** products and solutions bearing the Ecosolutions label by TotalEnergies
 More than **10,000** patents in force worldwide

Suppliers

\$27 billion worth of purchases of goods and services, from a network of more than **100,000** suppliers, supporting hundreds of thousands of direct and indirect jobs worldwide

Shareholders

\$10.0 billion distributed as dividends (ordinary and special)⁽²⁾
 Approximately **1.5 million** individual shareholders
65% of employees are shareholders

Communities

Fostering social and economic development in host countries with contributions amounting to **\$19,825 million** in income tax, **\$13,219 million** in production taxes paid by EP activities, **\$2,202 million** in employer social charges and **\$17,689 million** in excise taxes
 A global integrated local development approach (in-country value)

Climate

Reducing GHG emissions (Scope 1+2) from operated facilities from **46 Mt CO₂e** in 2015 to **40 Mt CO₂e** in 2022
 Reducing methane emissions⁽³⁾ from operated facilities by **50%** between 2010 and 2020 and by **34%** between 2020 and 2022
 Scope 3⁽⁴⁾ GHG emissions limited to **389 Mt CO₂e** excluding the COVID-19 effect in 2022, below the level of 2015
 Reducing Scope 3 GHG emissions of the petroleum products sold worldwide by **27%** excluding the COVID-19 effect in 2022, compared to 2015
 Reducing carbon intensity of the energy products used by customers by **12%** between 2015 and 2022

(1) Including 20% of Adani Green Energy Ltd gross capacities effective first quarter 2021 and including 50% of Clearway Energy Group effective third quarter 2022.

(2) Excluding dividends paid to non-controlling minority interests.

(3) Excluding biogenic methane.

(4) GHG Protocol - Category 11.

1.2 Our strategy: an integrated multi-energy Company

1.2.1 How can we respond to current energy demand while preparing for the future?

The energy transition is underway but the world still uses fossil fuels to meet 81% of its energy needs. So to keep global warming to well below 2°C, in line with the Paris Agreement, we must drastically reduce our consumption of fossil fuels (coal, oil, gas) and make the world energy system evolve by building the new low-carbon energy system at a much faster pace. Our collective challenge – which became evident in 2022 – is to reconcile the energy transition with the need for energy security and concerns over its cost. When the supply of oil or natural gas is restricted while demand continues to rise, the resulting price increases and supply insecurity have an immediate and acute impact on communities. To meet the challenge of the energy transition and still ensure that reliable energy is available in the short term at the lowest possible cost, we need to invest in two energy systems simultaneously: we must ensure the current system continues to operate responsibly, and at the same time speed efforts to build a new system centered on low-carbon energies (renewable electricity, biofuels and biogas, clean hydrogen and synthetic fuels, CCS solutions for offsetting residual fossil-fuel emissions).

We can also leverage two measures that will deliver immediate results: replacing coal in energy applications whenever possible and investing heavily to improve energy efficiency.

That, in essence, is TotalEnergies' strategy: to continue providing the energy the world needs now, notably natural gas to replace coal, while responsibly and sustainably accelerating the transition to low carbon energy solutions. This is how, in practice we support to the goals of the Paris Agreement, which calls for reducing greenhouse gas emissions in the context of sustainable development and the fight against poverty, and which aims to keep the increase in average global temperatures well below 2°C compared to pre-industrial levels.

Events in 2022 gave the Company renewed confidence in its strategy. It is investing with discipline, at a time when its markets continue to evolve at an uncertain pace. Its portfolio of multi-energy businesses gives it the flexibility and discretion to position itself as a leader in the energy transition, regardless of its speed.

The energy transition depends, first, on electrifying energy use, which will require a massive increase in green electricity. TotalEnergies is expanding across the entire electricity value chain, from production of

intermittent renewables for flexible power generation to natural gas, storage, trading, and sales, with an eye on profitability. Its goal is to build an Integrated Power segment with a return on average capital employed higher than 10% and to rank among the world's top five providers of solar and wind energy by 2030, with gross capacity of 100 GW and an interim target of 35 GW by 2025 (the Company reached 17 GW as of year-end 2022).

Second, the energy transition depends on the development of new, low-carbon energies (biofuels and biogas, clean hydrogen and synthetic fuels combining hydrogen and carbon) that TotalEnergies has the core skills to produce. The Company is expanding into these new markets by focusing on circular resource management and deploying less-mature technologies at our own sites to test its business viability.

For natural gas, a transition energy, TotalEnergies is pursuing growth across the liquefied natural gas (LNG) value chain to consolidate its position as the world's third-largest supplier. LNG plays a key role in the net-zero roadmap for many coal-consuming countries. It's also a perfect partner for intermittent renewable energies: flexible, controllable CCGT plants ensure a secure electricity supply in the face of unforeseen weather events and fluctuations in demand.

In the oil business, the Company is pursuing a highly selective strategy, restricting its capital expenditure to projects that are less carbon-intensive and have a low breakeven point. That strategy allows to take full advantage of worldwide demand for oil, which continues to climb but is expected to start trending downward in the medium term as transportation goes electric; it can therefore ensure that its business operations remain profitable and resilient over the long term.

As they evolve, the energy markets are becoming increasingly interconnected and interdependent, particularly since electricity – the energy at the center of the transition – is a secondary energy, meaning that it depends on other energies and markets.

The integrated multi-energy strategy of the Company and its solid financial base are strengths that allow it to be a major player of the sustainable energy the world needs and make the most of the current changes, including the potential price volatility they may cause.

1.2.2 A Net Zero Company by 2050, together with society

With regard to greenhouse gas emissions, TotalEnergies is committed to shrinking its carbon footprint from production, processing and delivery to its customers. To begin with, the Company is moving forward with an ambitious action plan to reduce the greenhouse gas emissions for which it is responsible (Scope 1+2 emissions from operated facilities) to the strict minimum. The Company also invests in carbon storage and sequestration projects to "neutralize" its residual emissions and to be able to offer those CCS solutions to its major industrial customers.

Although the speed of transition will depend on the pace of change in government policies, consumer practices and corresponding demand, TotalEnergies has embraced the need to offer its customers affordable less carbon-intensive energy products, and to lend support to its partners and suppliers with their own low-carbon strategies.

Drawing on the actions already taken to revise its energy offerings and reduce carbon emissions from its operations, in 2022 TotalEnergies published an outline of how its businesses might evolve as it become a carbon-neutral energy company by 2050, together with society.

By 2050, TotalEnergies would produce:

- about 50% of its energy in the form of low-carbon electricity with the corresponding storage capacity, totaling about 500 TWh/y, on the premise that it develops about 400 GW of renewable capacity,
- about 25% of its energy, equivalent to 50 Mt/y of decarbonized fuels in the forms of biogas, hydrogen or synthetic liquid fuels from the circular reaction: $\text{H}_2 + \text{CO}_2 \rightarrow \text{e-fuels}$.

- about 1 Mb/d of oil and gas (about a quarter of the total in 2030, consistent with the decline envisaged in the IEA's Net Zero Scenario), primarily liquefied natural gas (roughly 0.7 Mb/d, or 25-30 Mt/y) with very low-cost oil accounting for the rest. Most of that oil would be used in the petrochemicals industry to produce about 10 Mt/y of polymers, of which two thirds would come from the circular economy.

That oil and gas would represent:

- Scope 1 residual emissions of about 10 Mt/y CO₂e, with methane emissions almost eliminated (to below 0.1 Mt/y CO₂e), those emissions would be offset in full by projects using nature-based solutions (natural carbon sinks),
- Scope 3 emissions totaling about 100 Mt/y CO₂e.

To get to net zero together with society, TotalEnergies would help to “eliminate” the equivalent of 100 Mt/y CO₂e generated by its customers by developing:

- a carbon storage service activity for customers that would store 50 to 100 Mt/y CO₂e,
- an industrial e-fuels business that would prevent 25 to 50 Mt/y CO₂e for the Company's customers through their production with 100% green hydrogen, while offsetting the intermittent nature of renewable energies to make them a viable replacement for fossil fuels.

1.2.3 2020-2030: a decade of transformation for now and the future

The vision of TotalEnergies potential transformation by 2050 is backed by an investment policy designed to accelerate access to low-carbon solutions (electricity and renewable energies, biogas and biofuels, low-carbon fuels, CCS) while we continue to meet the world's current energy demand. The world's population continues to grow and the inhabitants of emerging nations have legitimate aspirations to a higher standard of living, comparable to that of Western countries. The years 2020 to 2030 will mark TotalEnergies' transformation into a multi-energy company.

In practical terms, over the coming decade to 2030, TotalEnergies' ambition is to:

- increase its energy production from 14 PJ/d to 20 PJ/d to meet growing demand. Electricity (primarily renewable power) would account for half that increase, with target power generation of about

130 TWh, and liquefied natural gas would make up the balance, while oil production in the years up to 2030 would remain generally stable,

- pursue efforts to decarbonize the energy products offered to end customers, by decreasing its sales of petroleum products by more than 30% to align those sales with production of about 1.4 Mb/d. That reduction is consistent with the strategy of integration across value chains, and reflects the anticipated decline in fuel demand in Europe, where the shift to electric road transportation is well underway. As a result, oil will account for no more than 30% of its total sales, compared to 53% in 2019.

That forecast trend in its business operations up to 2030 underlies TotalEnergies' carbon emissions commitments over that same period.

Production and sales of energy

Energy production
PJ/d excl. Russia

Oil

- Maintaining the cash flow engine
- Aligning sales to demand and production

Gas

- Growing LNG production
- Integration along the LNG value chain

Energy sales
PJ/d excl. Russia

Integrated Power

- Creating value from integration in electricity
- Renewables: 100 GW by 2030, ROE > 10%

Low-carbon molecules

- Growing biofuels (SAF), biogas, CCS business
- Developing low-carbon H₂ for our refineries
